

BÜLENT CİHANTIMUR

Spider Web Aesthetic Course

This Course Will Consist of Presentation and Live Treatment With Doctor B.

The Live Treatment Will Be Conducted with the Team of Participating Doctors and they will watch and live practice the operation.

Spider Web Aesthetics is a revolutionary non-surgical technique for skin tightening and rejuvenating developed by Doctor.B

This technique is inspired from the spider web, the strongest and the most elegant structure in Nature.

This newly developed technique is now being used as an alternative method of facelift surgeries in more simple and safe way with effective results

This safe technique can be performed on any parts of the skin where needed; the neck, arms, breast, buttocks and inner thighs

It is performed by placement of polydioxanone sutures to subcutaneous tissue via thin needles and knitting them together under the skin. Tissue reaction occurred against these sutures which were knitted just like the spider web results in collagen production with the help of fibroblasts and growth factors. Collagens surround the sutures and create a natural web structure.
